Quiz — PPAP / Secure Drop

Fillable quiz — type answers in the fields. Blank copies are already under `my-work/quizzes/`; answer them in place. Answer keys are not included.

1. Why: Why is sending the ZIP password in a second email on the same channel weak?

2. Scenario: User missends a link — which API action must win immediately, and what should a subsequent download return?

3. Spot the bug: OTP compared with == on raw strings stored in the share record. What should you do instead and **why**?

4. Why: Name one malware-scanning problem with encrypted ZIPs at the gateway.

5. Why: Does this course treat PPAP as region-only culture content? What framing should you use instead?

6. Why: Why hash the OTP at rest in the kata?
