Quiz — IR / detection

Fillable quiz — type answers in the fields. Blank copies are already under `my-work/quizzes/`; answer them in place. Answer keys are not included.

1. Name the first and last CSF 2.0 functions returned by `phase_order` / `csf_function_order`, and **why** Govern/Identify/Protect readiness belongs before Detect for a hold-queue product.

2. Scenario: US→JP in 45 minutes — does the kata flag impossible travel? **How** should an analyst triage true vs false positives?

3. Spot the bug / why: A postmortem only lists people to blame, no actions. What fails for future incidents?

4. Which NIST SP covers IR in this reading, how does Rev. 3 relate to CSF 2.0, and **why** use a shared standard vocabulary on a global team?

5. Are course postmortems required to include a non-English summary line? **Why** that course policy?

6. Why keep EDR/MDR discussion vendor-neutral in this module?

7. Scenario (Okta HAR 2023): A support HAR may contain live session tokens. What is the first containment step, and **why** treat HAR uploads as credential material?

8. Spot the bug / why: A Prometheus counter is labeled with `user_email` and `session_id`. What goes wrong?
