Quiz — SRE basics

Fillable quiz — type answers in the fields. Blank copies are already under `my-work/quizzes/`; answer them in place. Answer keys are not included.

1. Expand **SLI**, **SLO**, and (optionally) **SLA**. For each, give one sentence on **how** it is used in decisions.

2. What is an **error budget** for, and **why** tie it to release freezes?

3. Name one bad vanity metric for MailGuard and **why** it fails as an SLI.

4. What does “blameless” mean in a postmortem, and **why** does blame-first culture hurt detection quality?

5. Scenario: Error budget is exhausted mid-week. What ship/freeze behavior is typical, and **why**?

6. Spot the bug / why: An alert fires on every single failed request with no burn-rate or window. What goes wrong for on-call?

7. Why / how: Why configure **two** burn-rate windows (fast page + slow ticket) instead of a single window on the SLO?
