Quiz — Phish Lite

Fillable quiz — type answers in the fields. Blank copies are already under `my-work/quizzes/`; answer them in place. Answer keys are not included.

Complete after the module reading. Check the separate answer key only after you attempt every item.

1. Why label a phishing simulation clearly as training (consent/trust), not only “because the docs say so”?

2. What should you never collect in a learning clone, and **why** is that a hard boundary?

3. Name one metric besides click rate and explain **how** it reflects culture change better.

4. Why is time-to-report useful for mail-security programs?

5. Scenario: a simulation page mirrors a real login pixel-perfect including a password field that POSTs to your server. What is wrong mechanically and ethically?

6. Spot the bug / why: results page publicly ranks employees who clicked. What cultural failure follows?
