Quiz — Phish Lite (Svelte deepen)

Fillable quiz — type answers in the fields. Blank copies are already under `my-work/quizzes/`; answer them in place. Answer keys are not included.

1. Name two metrics better than raw click rate alone and **why** each matters.

2. Scenario: sim posts passwords to your server “for scoring” — allowed here? Explain **how** scoring should work instead.

3. Spot the bug / why: campaign email omits any training disclosure.

4. Which UI framework family does this module deepen toward, and **why** is framework choice secondary to ethics gates?

5. Why require consent in `ethicalSimOk` before running a campaign flow?

6. Should simulations target real customer mailboxes without notice? **Why?**
