Quiz — Collab review

Fillable quiz — type answers in the fields. Blank copies are already under `my-work/quizzes/`; answer them in place. Answer keys are not included.

1. Name three conventional commit types and **why** a clear type helps reviewers/bisect.

2. Scenario: PR touches 80 files mixed refactors + auth — what do you ask for, and **how** does splitting reduce risk?

3. Spot the bug / why: approving a PR that adds `config/production.pem`. What do you do next if it might be real?

4. What file defines required reviewers by path, and **how** does that improve security-sensitive paths?

5. Why prefer small PRs for hold-release or IAM changes?

6. Should this course’s main history be rewritten to practice rebase games? **Why?**
