# Self-check — Crypto hygiene

Fillable quiz — type answers in the fields, then save a copy under `my-work/quizzes/` in the course repo. Answer keys are not included.

Complete after `../readings/crypto_hygiene.md`. Attempt before opening the answer key.

**1.** Expand **HMAC** and say what secret it needs that a bare hash does not.

**2.** Expand **AEAD**. What does the “A” (associated data) typically protect?

**3.** Expand **TLS**. What does a server **certificate** bind together at a high level?

**4.** Name one misuse this kata refuses (wrong key length, nonce reuse, inventing a cipher, …).

**5.** List three **key lifecycle** verbs you should be able to discuss in an interview.

**6. Scenario:** A teammate proposes storing `sha256(api_key)` next to ciphertext “for integrity.” What do you push back with?
