Self-check — Hold rules

Fillable quiz — type answers in the fields, then save a copy under `my-work/quizzes/` in the course repo. Answer keys are not included.

Complete after `../readings/hold_rules.md`. Attempt before opening the answer key.

1. Expand **DLP** and give the three policy actions this kata models.

2. What does **first-match-wins** mean for an ordered rule list?

3. Why does this kata avoid inventing a **DSL**?

4. Name one real-world product family that uses “inspect → match → act” on email (from the reading links).

5. Scenario: Rule 1 holds if subject contains `invoice`; Rule 2 allows domain `partner.example`. A message to `partner.example` with subject `Q4 invoice` — what happens under first-match-wins if Rule 1 is listed first?

6. What should you read as the **contract** before writing the stub implementation?
